

What registrants do on the S7 page

Every US user who reached **S6** (qualifier form done) lands on the S7 page: pick a time slot, add a LinkedIn URL, upload a resume, finish. This report counts who did what there, and how each group converted to a sale and attended the webinar against all registrants. **13,387 registrants, 1 August – 28 September 2026.**

1. Overall funnel, month over month

How to read this: distinct users per step, each step counted independently, so a step is everyone who reached it that month. Percentages in the step-conversion block divide the two steps named.

STEP	AUGUST 1 – 31 AUG		SEPTEMBER * 1 – 28 SEP	
	users	% of S1	users	% of S1
S1 Traffic excl. bounced	119,285	—	89,596	—
S2 CTA → webinar	13,139	11.01%	10,230	11.42%
S3 PII submitted	7,878	6.60%	6,536	7.29%
S4 Webinar slots (registration)	7,541	6.32%	6,211	6.93%
S5 GQL form	7,082	5.94%	5,800	6.47%
S6 Qualifier form	5,529	4.64%	4,873	5.44%
S7 Resume step / finish	4,634	3.88%	4,056	4.53%
STEP CONVERSION

S7 ÷ S1	3.88%		4.53%	
S7 ÷ S4	61.45%		65.30%	

* September runs to 28 September.

2. Month over month — overall

How to read this: section 3 split by month. Each month is compared with its own registrants; September has had less time to close, so read across rows within a month, not down columns between months.

SEGMENT	AUGUST				SEPTEMBER *

5. Hypothesis and insights

Hypothesis tested: what a registrant does on the S7 page — picking a slot, adding LinkedIn, uploading a resume, submitting — is related to whether they attend the webinar (WA %) and whether they buy (sales conversion).

Verdict: supported, for both. The more of the S7 page a registrant completes, the more likely they are to attend and to buy. The link is stronger for sales (up to **2.1×** all registrants) than for attendance (up to **1.24×**). It holds in August and in September, in paid and in non-paid — 39 of 40 input-by-slice checks point the same way. It is a **correlation**: it identifies the stronger leads, it does not prove the page creates them.

Conversion and attendance rise with every input touched

Users who reached S6, Aug + Sep, by how many of the three inputs (slot, LinkedIn, resume click) they touched. Users per bar: 3,646, 3,462, 1,794, 1,330. Trend test: conversion $p < 0.001$, attendance $p < 0.001$.

- 01 **A clear dose-response.** Touching none of the three inputs converts at **1.37%** with **41.9%** attendance — below all registrants on both. Each extra input lifts both, up to **4.14%** and **56.8%** for all three. The 1,330 users who touched all three are 13% of S6 users but bring 23% of S6 sales; the 3,646 who touched none are 36% of S6 users and 21% of S6 sales.

Each input on its own goes with higher conversion and attendance

- 02 **The resume upload is the strongest single signal — the upload, not the click.** Uploaders convert at **4.00%** (2.0× all registrants) and attend at **56.3%**. Users who opened the file picker but never uploaded convert at **2.46%** and attend at **49.8%** — lower on both (conversion $p = 0.038$, attendance $p = 0.002$). In paid, users who clicked but did not upload convert at 1.09% — below the paid average of 1.40% — while paid uploaders convert at 2.73%.

- 03 **Skipping the slot marks the weakest S6 users.** Slot selection is the most common input: 3.01% vs 1.37% conversion and 51.0% vs 42.7% attendance. S6 users who pick no slot convert below all registrants. LinkedIn behaves the same way (3.35% vs 1.85%).

- 04 **Stopping after S6 is the sharpest attendance warning.** Users who complete S6 but never submit S7 attend at **32.8%** against **50.5%** for those who submit ($p < 0.001$), and convert at about half the rate. Stopping at S4 is lower still for attendance (25.3%). Stopping between S5 and S6 hurts conversion (0.87% vs 2.30%) but barely moves attendance (45.1% vs 47.4%).

- 05 **What this supports, and what it does not.** S7-page behaviour is a cheap lead-quality signal, available minutes after registration: uploaders and all-three users are the best prospects for follow-up, while no-input and stopped-after-S6 users are the likeliest to miss the webinar. It does **not** show that making people fill these inputs would raise sales — motivated users both fill more and buy more. That needs an A/B test, for example a stronger slot or resume prompt for half of traffic.

Limits. Non-paid is small (430 registrants, 25 sales), so its rows are directional. September leads have had less time to close and attend. Some people appear on two devices; counted per person, conversion rates move by 0.1pt or less.
